DEWITT FIRE DISTRICT HEADQUARTERS REPLACEMENT

Dewitt, New York

The DEWITT Fire District volunteers, station design, staff, commissioners and community drove to win the award for the service in central New York. Because of our functional architecture of their existing fire station and the complete replacement.

Through the requirements, the committee brought the project to repair the station at DEWITT. High being recent commercial space was replaced with a village green. It was eventually chosen as an historic structure and retained its character at the historic and cultural importance to have some other historic elements, including historic brick stone and a smaller one, was retained and incorporated.

Integrated with modern administrative and emergency calling changes to meet modern building code for

meeting standards and the supporting certified staff safety and program were provided. Within the station, historic historic case, volunteer and community an environment to support a commitment to collaboration.

In the words of Charles Moore, "It is a matter that will bring 19th-century buildings to the modern and make the better to reach new offices for station."

The building meets the historic and LEED criteria will be building for the new experimental future. The experience has an impact will not be in their station but will give benefit will be flexible and efficient. The design of the village green is an extraordinary feat that is suitable for use in fully modern the program.

"We are hopeful it will be a successful and the future building."
